Brainstorm & Idea Prioritization

The project brainstorm focuses on creating a centralized ServiceNow-based network request management system for handling network-related requests such as Wi-Fi, LAN, VPN, and other connectivity services. The solution focuses on structured request data capture, guided submission, dynamic form behavior, approval management, automated task creation, assignment, notifications, and future reporting.

Idea	Group	Priority
Service Catalog	User Request Management	High
Network Request Catalog Item	User Request Management	High
Custom Network Database Table	Data Management	High
Network Task Table	Task Management	High
Catalog Variables	Structured Data Capture	High
Catalog UI Policies	User Experience	High
Approval Automation	Workflow Automation	High
Automated Network Task Creation	Workflow Automation	High
Assignment to Network Fulfillment Team	Task Management	High
Email Notifications	Communication	Medium
Request Status Tracking	Monitoring	High
Reports and Dashboards	Analytics	Medium
