Project Design Phase

Solution Architecture

Date	5 September 2026
Student Name	Koka Kaliprasad
Project Name	Automated Network Request Management
Maximum Marks	

Solution Architecture

The architecture connects the **Service Portal**, **Network Request Catalog**, **validation rules**, **approval process**, and **Network Tasks** to manage network requests efficiently.

Figure 1: Solution architecture for the Automated Network Request Management project.

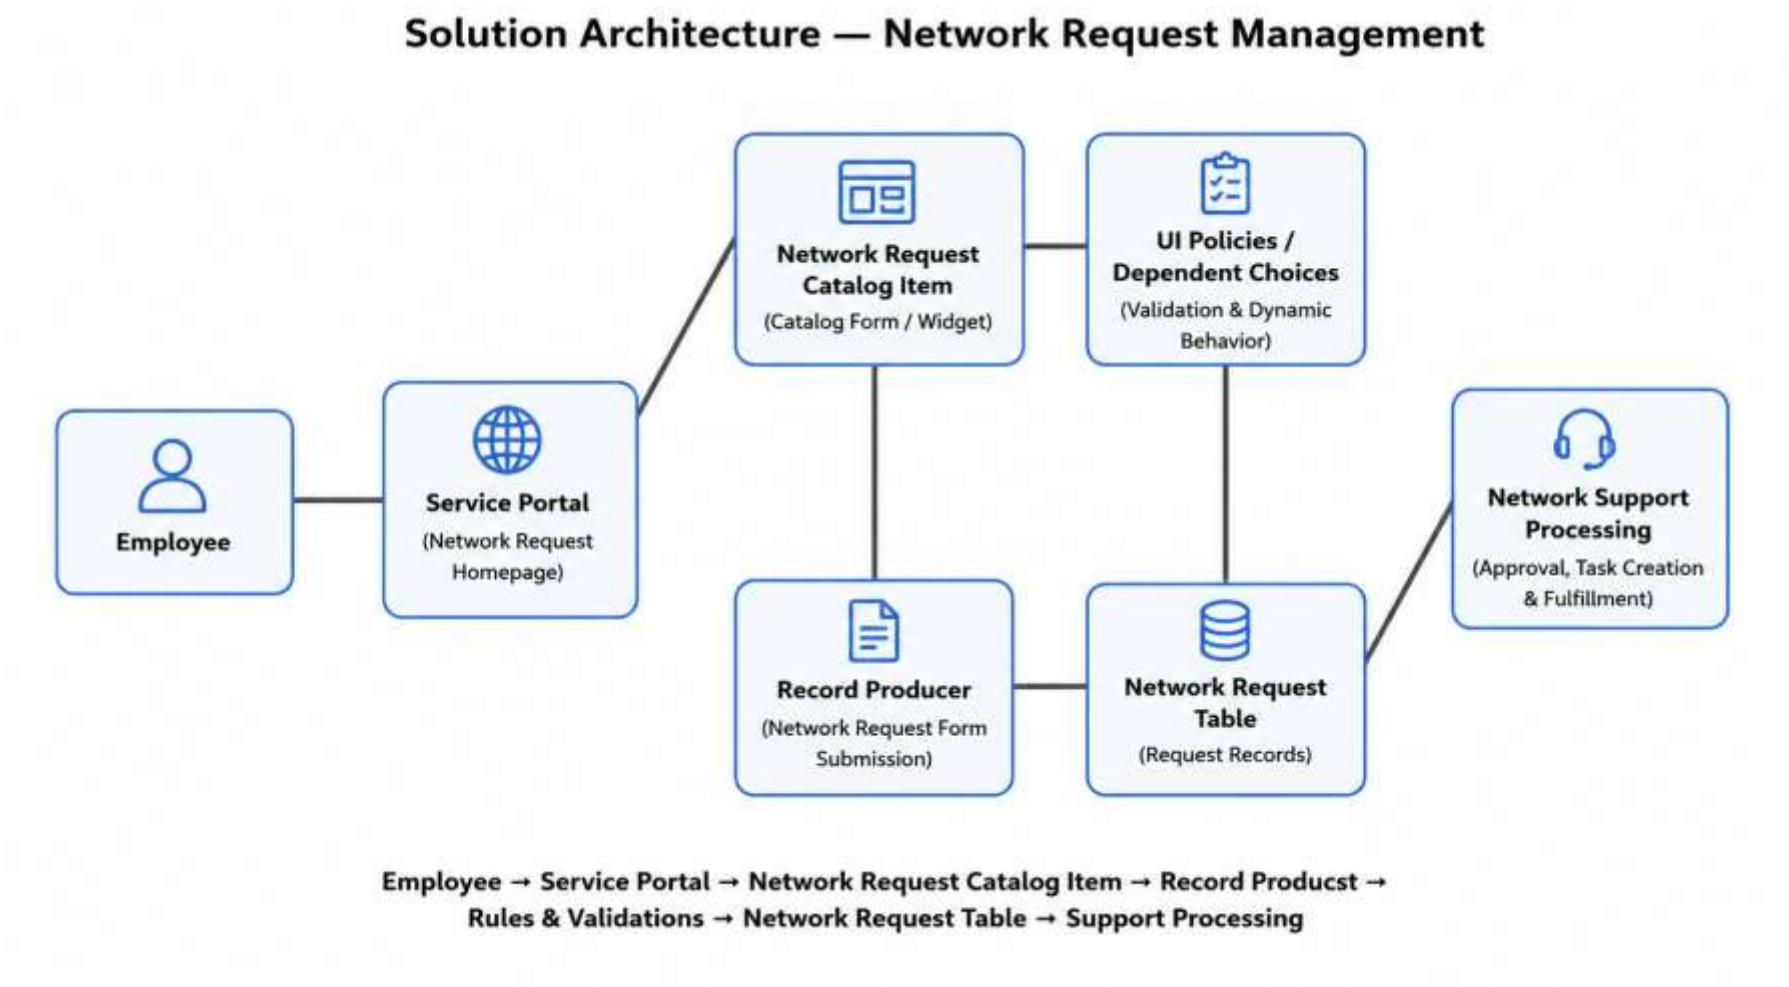

Figure 1: Solution architecture for the Automated Network Request Management project.

Layer	Components	Responsibility
Experience	Service Portal, Network Request Catalog	Employee request interface.
Interaction	Catalog Client Scripts, UI Actions	Controls form interaction and behavior.
Catalog	Network Request Catalog Item	Collects network request details.
Rules	Catalog UI Policies, Client Scripts	Validates and controls fields.
Automation	Flow Designer, Approvals	Processes approvals and creates tasks.
Data	REQ, RITM, Network Tasks	Stores request and fulfillment records.
References	sys_user, sys_user_group	Stores user and group reference data.
